Taping patients eyes during anaesthesia does not provide adequate protection. This practice is not recommended by the AfPP, which notes "Eye pads specifically designed for this purpose" can be used, (see AfPP 2022 Standards and Recommendations for Safe Perioperative Practice; Recommendation 2.12.13)

EyeGuardian is the result of over 10 years feedback on Eyegard™ - the World's leading anaesthetic patient eye protection product. This has identified areas where the Eyegard™ design could be improved.

EyeGuardian offers the following advantages:

- Improved anatomical fit, not covering eyebrows

- Reduced usage of materials and packaging, making it friendly to environment and budget
- Reduced inventory, the new design range comprises two types, not three. The EyeGuardian range is suitable for both adults and children

EyeGuardian's specifically formulated mild adhesive provides a consistent, even pressure on the eye. This not only reduces bruising, eliminates eyelash removal and minimises disease transmission, but it also helps the cornea stay moist throughout, preventing corneal abrasion. The purple tab allows access to the eyes at any time for checking and maintaining eye condition.
